

National Severe Weather Warning Service

Chief Forecasters Assessment

Another area of low pressure and associated frontal systems are destined to move across the UK on Thursday. There is considerable uncertainty in details, but the amounts and the intensity of the associated rain may again be sufficient to caused further flooding problems. Totals could exceed 25mm.

The Met Office have issued a **Yellow Alert of Rain**

Valid from **00:00 on Thu, 27th Dec 2012** until **18:00 on Thu, 27th Dec 2012**

Areas of rain and heavy showers will move east across the region during the day. The public should be aware that given the continuing saturated state of the ground this may lead to further localised flooding.
